## We coach your project along the SAFe® Implementation Roadmap

### Identifying the first ART

Phase 1 is used to identify value streams and to select which is best suited for the first Agile Release Train (ART). In parallel, we train the organization's leadership team how to set-up and lead the scaling program.

### Launching the first ART

Phase 2 is used to launch the first ART. A successful first ART Launch is key to the success of the entire scaling project.

We train and coach all people on the ART, and the first Program Increment is prepared, planned, and executed under our guidance.

### Organization-wide Scaling

Phase 3 is used to further deploy the Lean-Agile Mindset and SAFe in all relevant parts of the organization. More Agile Release Trains and Solution Trains are launched, and traditional Portfolio Management is gradually transformed into Lean Portfolio Management. The organization is progressing towards business agility.

## wibas Support

When implementing SAFe® wibas applies the phases and steps of the SAFe® Implementation Roadmap. We guide our customers to see their implementation projects as part of a transformation journey towards „agile organization“ and “business agility”.

### SAFe® with wibas

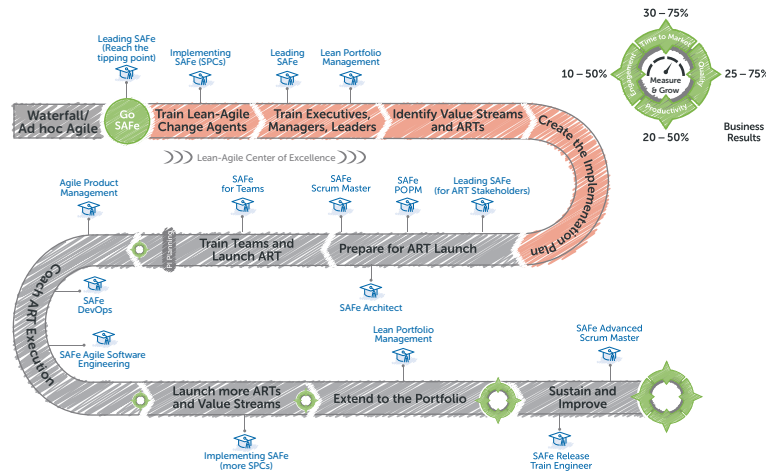

Since 2013, wibas has been successfully coaching its customers on their SAFe® implementation projects. These include the agile transformations of software, hardware, and systems engineering organizations.

### Change Management with wibas

„Successfully scale using common sense“.

wibas encourages its customers to think and act in a solution-oriented manner, regardless of frameworks. The key to a successful scaling agile project is a clear aim of achieving business benefits; without this focus such transformations often experience a lack of acceptance. wibas has 20 years of experience of successfully accompanying its customers through transformation projects.

In the sections below you will find an overview of how wibas uses the SAFe Implementation Roadmap for successful agile transformation of your organization.

## Challenges in Phase 1

### Identifying the first ART

In phase 1, the first challenge is to align the scaling project around a motivating and shared vision. Next, we concentrate on identifying value streams and an Agile Release Train (ART) that is suited as the first ART Launch. It is important that the first ART Launch will be a success. If not, the whole transformation program may be at risk.

#### Main activities

- Formulating a shared vision to align the organisation
- Training and coaching of leaders, managers and change agents
- Establishing a Lean-Agile Center of Excellence (LACE)
- Identifying Value Streams and the first ART

## wibas Support

### SAFe® Kick-Off Workshop

This one-day workshop is designed to align the scaling project. The focus is on assessment of status quo, formulating a shared vision, making an inventory of required training and coaching as well as defining the next steps for developing a plan for the first ART Launch.

### Value Stream Workshop

This all-day workshop is designed to analyze value streams in your organization, and to identify a first ART for the initial ART Launch.

## wibas Training

### Implementing SAFe® (SPC)

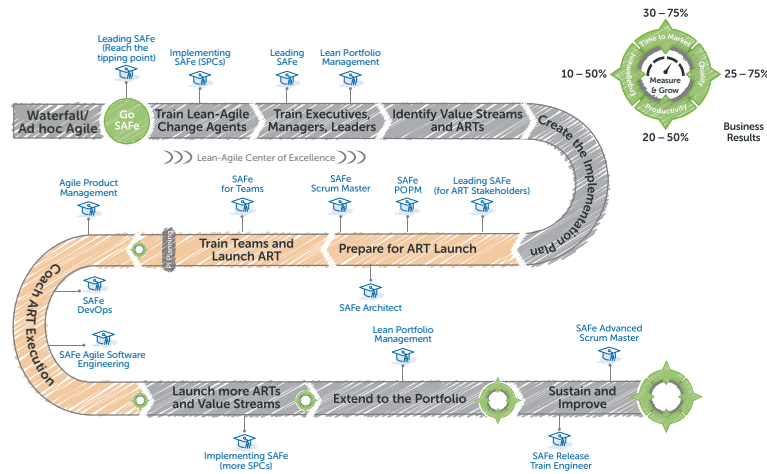

In this training, participants are trained as a leading change agent. As a certified SAFe Program Consultant (SPC) they will coach and enable your business to succeed in a disruptive market.

### Leading SAFe® (SA)

In this training, participants will learn how, as a lean-agile leader, they can support your organization's agile transformation with SAFe®.

### SAFe® Lean Portfolio Management (LPM)

The training participants will learn to transform traditional Portfolio Management by applying the principles and techniques of Lean Portfolio Management.

## Challenges in Phase 2 Launching the first ART

In Phase 2, the challenge is to successfully launch the first ART, and to establish a positive momentum for scaling. A successful initial ART launch is critical to the success of the transformation project. The focus is on preparing and executing a successful first Program Increment (PI) planning, as well as coaching and monitoring the ART during one or more Program Increments. In parallel, all the people on the ART are trained in their SAFe® roles.

### Main Activities

- Training and coaching of product and process managers, as well as team members
- Preparing and executing the first PI Planning event
- Coaching the ART during the first few Program Increments
- Helping you run events at the ART level, and at the team level
- Introducing DevOps and establishing a Continuous Delivery Pipeline

## wibas Support

### Support with launching an ART

We support you with dedicated training and coaching in the preparation and successful launch of the first ART.

### Support after the first PI Planning

We support you in the implementation of agile ways of working, both at the team level and for the ART as a whole.

## wibas Training

### SAFe® Product Owner/Product Manager (POPM)

In this training your Product Owners and Product Managers will learn how to successfully collaborate in their roles.

### SAFe® Scrum Master (SSM)

In this training, your Scrum Masters will learn how to perform their leadership role within the SAFe® context.

### SAFe® for Teams (SP)

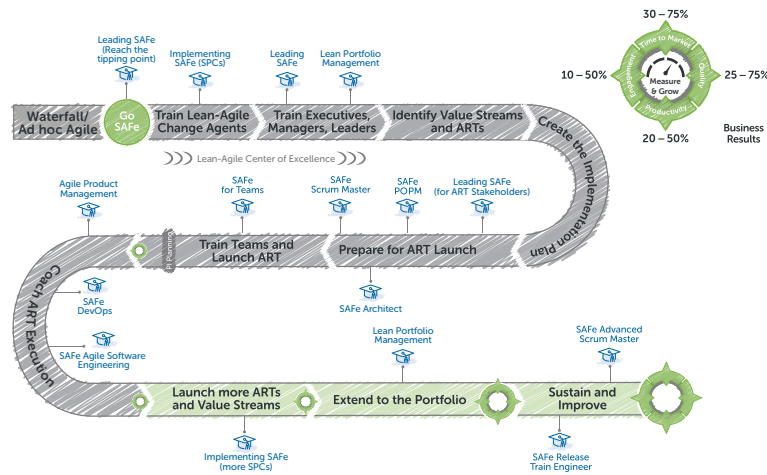

This training prepares all teams on the ART for effective planning and execution of PIs.

### SAFe® Agile Product Management (APM)

In this training your Product Managers will learn mindset, skills and practices of customer centricity and design thinking for effective and efficient agile product management.

### SAFe DevOps® (SDP)

In this training, participants will learn how to use DevOps to improve the flow of value creation in the organization.

## Challenges in Phase 3 Scaling up to the entire Organization

In Phase 3, following the successful launch of the first ART, a company faces the challenge of continuing its transformation into an agile organization. In addition to launching further ARTs, this includes the introduction of additional steering for very large scale teams-of-teams and for strategic portfolio management.

### Main Activities

- Launching more ARTs
- Coordination across multiple ARTs
- Implementing Lean Portfolio Management to lead the agile organisation
- Advanced training for RTEs and Scrum Masters

## wibas Support

### Lean Portfolio Management (LPM) workshop

In this workshop, your portfolio management team will start implementing the first elements of Lean portfolio Management, including a Portfolio Kanban System, and Lean Budgets and guardrails. This workshop is held after attending the Lean Portfolio Management (LPM) training. Together, we identify the next steps for implementing LPM (e.g. a budgeting workshop).

## wibas Training

### Implementing SAFe® (SPC)

In this training, participants will be trained as leading change agents. As a certified SAFe Program Consultant (SPC) they will coach and enable your business to succeed in a disruptive market.

### SAFe® Lean Portfolio Management (LPM)

In this training, participants learn to implement Lean Portfolio Management in the organisation.

### SAFe® Release Train Engineer (RTE)

In this training, participants will learn how to enable and ensure end-to-end value through an ART.

### SAFe® Advanced Scrum Master (SASM)

In this training, participants will learn how to take your leadership role as an active Scrum Master in supporting an SAFe® implementation.
