# What is the benefit of Scrum?

Scrum ensures that the most important requirements are implemented first, and deals effectively with expected changes in requirements.

## You can speed up with Scrum to get a usable product

The customer requirements are implemented in Scrum according to their priority. This ensures that high priority items will be implemented first. Other functions that "are nice-to-have are implemented last or not at all. Data shows that about half of a product's features are not used, Scrum can prevent the development of unnecessary work. Scrum focuses the development efforts, increases efficiency and speeds up the delivery of results.

## Wth Scrum you can increase your productivity

In many projects, the development of unprioritized open issues and problems slows down the progress and creates unnecessary work. In Scrum, these are identified in the Daily Scrum Meeting, prioritized and systematically resolved. This ensures that the team can be operational again as quickly as possible.

## The team spirit in your projects and the satisfaction of your employees will be increased with Scrum

In Scrum the team plans the activities to implement the requirements, and it organized itself in through mutual commitment and close communication. The autonomy and self-organization of the team significantly improves the satisfaction of individual employees and the entire team.
